4)

$ma = -\mu_k mg \rightarrow a = -\mu_k g$

tempo $\rightarrow v_0 - \mu_k g t = 0 \rightarrow t = \frac{v_0}{\mu_k g}$

distância $\rightarrow x = v_0 t - \frac{1}{2} a t^2 = \frac{v_0^2}{2\mu_k g}$

$\mu_k = \frac{v_0^2}{2xg} = \frac{25}{2 \cdot 36 \cdot 10} = \boxed{0{,}035}$
